Acknowledgement

I would like to express my sincere gratitude to **Bharat Electronics Limited (BEL) – Smart City Division** for providing me with the opportunity to undertake this internship project. Working in a real-world, mission-critical environment has been an immensely valuable experience that has significantly contributed to both my academic and professional growth.

My heartfelt thanks go to the entire **Smart City Division team** for their unwavering support, encouragement, and constructive feedback throughout the course of the project. Their technical expertise and strategic insights were instrumental in shaping the system into a robust and practical solution.

I am especially thankful to my mentors and supervisors at BEL for granting me the autonomy to independently design, develop, and deploy the Performance Monitoring System with AI-Powered Anomaly Detection. Their timely guidance and trust in my abilities played a crucial role in the successful execution of this project.

I also extend my appreciation to my academic institution, faculty members, and peers for their indirect yet valuable support during this period.

This project has not only strengthened my technical capabilities but also deepened my understanding of real-time system monitoring and smart infrastructure solutions in large-scale operational environments.
